The combined storage data for 2022 is provisional and subject to change. Effective May 27, 2021, storage values are based on the Texas Water Development Board volumetric survey of Lake Buchanan published in 2020 and the Lake Travis survey published in 2021.

The Nov. 1 combined storage is 301,512 acre-feet greater in 2022 than in 2011.
Lakes Buchanan and Travis Total Combined Storage Projections

Combined Lakes Projection:
- Lakes Buchanan and Travis combined conservation storage is managed to a maximum of 1.95 million a-f from May to October and 2 million a-f from November to April due to seasonal lake level limits for Lake Buchanan.

Date: Nov. 1, 2022
Note: One acre-foot equals 325.851 gallons
Average for November: 666.40 feet msl

Historic low (1951): 614.18 feet msl

*Based on results from the draft stochastic model under development to reflect provisions of the 2020 Water Management Plan*
Average for November: 1,010.87 feet msl

Historic low (1952): 983.70 feet msl

*Based on results from the draft stochastic model under development to reflect provisions of the 2020 Water Management Plan
Lake Level Comparisons

*For purposes of the 2020 Water Management Plan, the combined storage is defined as the total of the daily average volume of water in lakes Buchanan and Travis. This determination excludes any water in Lake Buchanan above elevation 1,018 feet msl in the months of May through October or above 1,020 feet msl in the months of November through April and any water in Lake Travis above elevation 681 feet msl.
