LCRA’s dams — which create the Highland Lakes — are critical for water supplies and flood management in our region.

Our investment includes*:
- More than $86 million spent since fiscal year 2010.

LCRA does not receive state appropriations or have the ability to levy taxes. These capital projects are funded by rates paid by our firm water customers and electricity generated during hydroelectric operations. The map shows the locations of some of our key projects.

Our safety program includes:
- Weekly and monthly inspections by LCRA staff.
- Testing each floodgate every 30-42 days.
- Annual inspections by LCRA engineers.
- Additional inspections by third-party consulting engineers.

*Also includes investments in dams on lakes Bastrop and Fayette not pictured here.
