

Dredge & Fill Notification Checklist

FOR PROJECTS WITH LESS THAN 500 CUBIC YARDS OF DREDGING OR LESS THAN 500 LINEAR FEET OF SHORELINE STABILIZATION

Project Name:

Applicant Contact Information:

Street address of location (if applicable):

1. Survey or plat of the property where the dredge and fill activity will take place. Show the proposed locations of retaining wall, boat slip, boat ramp, and areas to be dredged. Identify limits of construction, haul/access roads, staging areas, and the location of erosion and sediment controls.
2. Evidence of ownership of property on which the requested work will take place (warranty deed or tax records), along with any lease agreements, easements, etc. If work is proposed on property owned by others, provide written permission from the owner to perform the work.
3. A description of the type and quantity of dredged material (if any), in cubic yards, to be removed from the site. Indicate how dredged areas will be stabilized (e.g. earth slope at 3 horizontal to 1 vertical, sheet piling, concrete/stone retaining wall, etc.)
4. A description of the plans for the disposal of any dredged material.
5. A description of the type and quantity of fill material, in cubic yards, to be placed below the normal waterline. (Include in this estimate any material that will be placed below the normal water level to build a retaining wall, boat slip, boat ramp, etc.)
6. Include an erosion and sedimentation control plan that indicates the types of controls (silt fence, sediment basins, turbidity curtains, etc.) to be used and their locations.
7. Provide a specification for restoration of all disturbed areas including any areas outside the lakebed used for access.
8. A copy of the U.S. Army Corps of Engineers application. (Mail the original directly to the Corps.) If covered by a nationwide permit, include the permit number and a copy of the pre-construction notice, if applicable.
9. A copy of the city or county floodplain permit, if applicable
10. Boat ramp proposals: describe materials that will be used to construct the boat ramp and include cross section drawings showing dimensions, slopes, elevations, and profile.

Contact LCRA to determine additional submittal requirements for projects involving materials/equipment staging in the lakebed or dredging/construction performed in submerged condition.

Contact LCRA to discuss Dredge and Fill Permit requirements if the activity will dredge more than 500 cubic yards of dredging or disturb more than 500 linear feet of shoreline stabilization.
